WATER FIRST

HANG IT WHERE
YOU KEEP THE WATER

1
MINUTE AT A ROLLING BOIL

8
DROPS OF BLEACH PER GALLON

30
MINUTES BEFORE YOU DRINK

How much to store

1 gallon × people × days. 3 days minimum. 2 weeks if you can.

Keep it good

- ☐ Sealed bottled water, or clean, food-grade containers with tight lids
- ☐ Cool, dark, away from fuel and chemicals
- ☐ Home-filled water: label the date, replace every 6 months
- ☐ Replace stored bleach yearly

If the water may be unsafe · in this order

1 · Check the advisory

If officials say **do not drink**, or it smells of fuel or chemicals, boiling, bleach and filters can't fix it. Use another source. **This sheet is for water with germs, not chemicals.** Clear water, 5–9% plain unscented bleach. Local advisories come first.

2 · Sealed bottled water, if you have it

For drinking, cooking, brushing teeth, washing food, and baby formula.

3 · Boil

BEST METHOD

Cloudy? Let it settle or strain through a clean cloth first. Rolling boil **1 minute**. Above 6,500 ft: 3 minutes. Cool, then cover.

or Bleach

NO HEAT? DO THIS

Plain unscented bleach, 5–9%. Never scented, splashless, or mixed with cleaners. Clear: **8 drops/gallon**. Cloudy: 16. Stir. Wait 30 min.

Filter

ONLY IF LABELED

Use one labeled to remove parasites. Most don't stop bacteria or viruses, so boil or bleach after.

BOIL WATER = boil before use.

DO NOT DRINK = don't drink, even boiled.

DO NOT USE = don't use for anything.

THE IDEA IS THE ART. THE HELP IS THE POINT.
